No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 4, Application US/09654600A

Sequence 4, Application US/09654600A

Patent No. 6649741

GENERAL INFORMATION:

APPLICANT: O'Brien, Timothy J.

TITLE OF INVENTION: TARG-15: An Extracellular Serine Protease

TITLE OF INVENTION: TOVERENCE: D6064CIP/D

FILE REFRENCE: D6064CIP/D

CURRENT PILING DATE: US/09/654,600A

CURRENT FILING DATE: 1999-10-20

PRIOR FILING DATE: 1999-10-20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 2, Application US/08557146
Patent No. 5834290
GENERAL INFORMATION:
APPLICANT: Beglind, Torbjorn
APPLICANT: Hansson, Lennart
TITLE OF INVENTION: Recombinant Stratum Corneum Chymotryptic
TITLE OF INVENTION: Bazyme (SCCE)
NUMBER OF SEQUENCES: 17
TITLE OF INVENTION: TADG-15: An Extracellular Serine Protease TITLE OF INVENTION: TADG-15: An Extracellular Serine Protease TITLE OF INVENTION: Overexpressed in Carcinomas FILE PREPRENCE: D6064CIP/D CURRENT APPLICATION NUMBER: US/09/644,600

Diagnosing cancer comprises detecting stratum corneum chymotrypsin enzyme

Claim 25; Page 113; 127pp; English.

The invention relates to diagnosing cancer especially ovarian cancer, by screening for stratum corneum chymotrypsin enzyme (SCCE). Proteases are considered to be an integral part of tumour growth and metastasis, and therefore, markers indicative of their presence or absence are useful for the diagnosis of cancer. The method is useful for diagnosing cancer, carcinoma and malignant hyperplasia. The SCCE oligonucleotide may be used to treat a cancer selected from ovarian, breast, lung, colon, prostate and other cancers in which SCCE is overexpressed. The present sequence is human SCCE peptide

The present invention describes NoVX proteins, where X can be 1 to 55 cc (e.g. NOV1). Also described: (1) a composition comprising a polypeptide described above and a carrier; (2) a kit composition or more containers, the composition described above; (3) an isolated nucleic acid containers, the composition described above; (3) a call or more comprising the nucleic acid molecule described above; (5) a cell or comprising the nucleic acid molecule described above; (5) a cell or comprising the nucleic acid molecule described above; (5) a cell or presence or amount of the above polypeptide or nucleic acid molecule in a sample; (8) methods for determining the presence or amount of the above polypeptide or nucleic acid molecule in a first mammalian subject; (9) a disease associated with altered levels of expression of the above collypeptide or nucleic acid molecule in a first mammalian subject; (9) a collypeptide or nucleic acid molecule in a first mammalian subject; (9) a method for identifying a potential therapeutic agent for above; (10) a method for identifying a potential therapeutic agent for above; (10) a method for identifying a potential therapeutic agent for above; (11) a method of aberrant physiological interactions of the polypeptide (11) a method of a pathology associated with the polypeptide; (12) a method for modulating or pathology associated with the polypeptide; (12) a method for modulating or pathology associated with the above polypeptide. NoVX or preventing a pathology associated with the above polypeptide or the nucleic acid molecule may be used to diagnose, treat or prevent metabolic correct or syndrome associated with a human disease. The polypeptide or the nucleic syndrome associated with a human disease. The polypeptide or the nucleic disease, immune disorders such as Alabeimer's disease or besity, infections, cancer, concerved because as the mucleic acid soles as a place of a pathology associated with a human disease. The polypeptide or probes, in chromosome mapping, ilssue typing, preventiv
                                                                                               New NOVX polypeptides and nucleic acids, useful for diagnosing, preventing or treating NOVX-associated disorders, e.g. diabetes, obesity, cancer or dyslipidemia, and in chromosome mapping, tissue typing or pharmacogenomics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        human; NOVX; antidiabetic; anorectic; antibacterial; virucide; immunomodulator; cytostatic; nootropic; neuroprotective; antiparkinsonian; antilipaemic; gene therapy; human disease; metabolic disorder; diabetes; obesity; infection; cachexia; cancer; neurodegenerative disorder; Alzheimer's disease; parkinson's disease; immune disorder; haematopoietic disorder; dyslipidaemia.

New NOVX polypeptides and nucleic acids, useful for diagnosing, preventing or treating NOVX-associated disorders, e.g. diabetes, obesity, cancer or dyslipidemia, and in chromosome mapping, tissue typing or

Claim 1; Page 170; 586pp; English.

The present invention describes NOVX proteins, where X can be 1 to 55

(e.g. NOV1). Also described: (1) a composition comprising a polypeptide
described above and a carrier; (2) a kit comprising, in one or more
containers, the composition described above; (3) an isolated nucleic acid
molecule which encodes a NOVX protein of the invention; (4) a vector
comprising the nucleic acid molecule described above; (5) a cell
comprising the above vector; (6) an antibody that immunospecifically
binds to the polypeptide described above; (7) methods for determining the
presence or amount of the above polypeptide or nucleic acid molecule in a
disease associated with altered levels of expression of the above
polypeptide or nucleic acid molecule in a first mammalian subject; (9) a
method of identifying an agent that binds to the polypeptide described
above; (10) a method for identifying a potential therapeutic agent for
use in treating a pathology that is related to an aberrant expression or

```
aberrant physiological interactions of the polypeptide; (11) a method of screening for a modulator of activity or of latency or predisposition to a pathology associated with the polypeptide; (12) a method for modulating the activity of the polypeptide described above; (13) methods of treating or preventing a pathology associated with the above polypeptide; no amend; and (14) a method for producing the above polypeptide; now a sequences have antidiabetic, anoredtic, antibacterial, virucide, now; immunomodulator, cytostatic, nootropic, neuroprotective, antiparkinsonian antilippement activities, and can be used in gene therapy. The polypeptide is useful in manufacturing a medicament for treating a syndrome associated with a human disease. The polypeptide or the nucleic acid molecule may be used to diagnose, treat or prevent metabolic collosocials and be used to diagnose, treat or prevent metabolic collosocials acides and various disorders such as Alzheimer's disease or Parkinson's disorders from the nucleic acids can also used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine and proportion the present sequence represents a human NOVX from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

The present invention describes NOVX proteins, where X can be 1 to 55 (e.g. NOV1). Also described: (1) a composition comprising in one or more containers, the composition described above; (3) an isolated nucleic acid molecule described above; (3) an isolated nucleic acid molecule described above; (3) an isolated nucleic acid molecule described above; (5) a cell or comprising the nucleic acid molecule described above; (5) a cell or binds to the polypeptide described above; (7) methods for determining the presence or amount of the above polypeptide or nucleic acid molecule in a sample; (8) methods for determining the presence or amount of the above polypeptide or nucleic acid molecule in a sample; (8) methods for determining the presence of or predisposition to a disease associated with altered levels of expression of the above polypeptide or nucleic acid molecule in a first mammalian subject; (9) a method for identifying an agent that binds to the polypeptide described above; (10) a method for identifying a pathology that is related to an aberrant expression or aberrant physiological interactions of the polypeptide; (11) a method of activity or of latency or predisposition to a berrant physiological interactions of the polypeptide; (12) a method for modulator of activity or of latency or predisposition to the activity of the polypeptide described above; (13) methods of treating the activity of the polypeptide described above; (13) methods of activities, and antilipaemic activities, and can be used in gene therapy. The mammal; and (14) a method for producing the above polypeptide is useful in manufacturing a medicament for treating a pathology associated with a human disease. The polypeptide or the nucleic significance and to disables or prevent metabolic activities, and can be used in gene therapy. The solutions and be used to disables or prevent metabolic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Smithson G, Millet I, Peyman JA, Kekuda R, Ju J, Li L, Guo X;

Human NOV18f protein SEQ ID NO:102.

(first entry)

06-NOV-2003

ADA05742;

The present invention relates to human tumour antigen-derived gene 15 (TADG-15) protein and coding sequence (see AAH23601 and AAB99500). TADG-15 is an extracellular serine protease. It was found that TADG-15 is over-expressed in ovarian tumours. TADG-15 protein or its fragments of 9-20 residues that lack TADG-15 protein or its fragments of 9-20 residues that lack TADG-15 protein or its fragments of 9-20 getting cancer. Furthermore, the TADG-15 gene can be used as a diagnostic or therapeutic target in cancer. The present sequence was used in a sequence homology alignment with the catalytic domain of TADG-15 Novel extracellular serine protease, termed tumor antigen-derived gene 15 protein overexpressed in carcinomas and DNA encoding it, for diagnosis, treatment, prevention of cancer, particularly breast, ovarian cancer. 0, Gaps Human Stratum Corneum Chymotryptic Enzyme, SCCE, catalytic domain. New NOVX polypeptides and nucleic acids, useful for diagnosing, preventing or treating NOVX-associated disorders, e.g. diabetes, obesity, cancer or dyslipidemia, and in chromosome mapping, tissue typing or pharmacogenomics.

Claim 1; Page 172; 586pp; English.

The present invention describes NOVX proteins, where X can be 1 to 55 (e.g. NOV1). Also described: (1) a composition comprising a polypeptide described above and a carrier; (2) a kit comprising, in one or more containers, the composition described above; (3) an isolated nucleic acid molecule which encodes a NOVX protein of the invention; (4) a vector comprising the nucleic acid molecule described above; (5) a cell comprising the above vector; (6) an antibody that immunospecifically binds to the polypeptide described above; (7) methods for determining the

presence or amount of the above polypeptide or nucleic acid molecule in a disease associated with altered levels of expression of the above a disease associated with altered levels of expression of the above polypeptide or nucleic acid molecule in a first mammalian subject; (9) a method of identifying an agent that binds to the polypeptide described above; (10) a method for identifying a potential therapeutic agent for use in treating a pathology that is related to an aberrant expression or aberrant physiological interactions of the polypeptide described above constraint physiological interactions of the polypeptide; (11) a method of a pathology associated with the polypeptide; (12) a method for modulating or pathology associated with the above polypeptide in a mammal; and (14) a method for producing the above polypeptide in a mammal; and (14) a method for producing the above polypeptide; NoVX sequences have antidabetic, anometric, antibacterial, virucide, immunomodulator, cytostatic, noctropic, neuroprotective, antipaxinsonian and antilipaemic activities, and can be used in gene therapy. The collision activities, and can be used in gene therapy. The solls is useful in manufacturing a medicament for treating a syndrome associated with a human disease. The polypeptide or the nucleic acid molecule may be used to diagnose, treat or prevent metabolic disorders such as diabetes or obesity, infections, cancer, neurodegenerative disorders such as Alzheimer's disease or Parkinson's disease, immune disorders such as Alzheimer's disease or Parkinson's dispense, immune disorders such a shadenes and various probes, in ohromosome mapping, tissue typing, preventive medicine and present invention. 0; human, NOVX, antidiabetic, anorectic, antibacterial; virucide; immunomodulator; cytostatic; nootropic; neuroprotective; antiparkinsonian; antilipaemic; gene therapy; human disease; metabolic disorder; diabeter; obesity; infection; cachexia; cancer; neurodegenerative disorder; Alzheimer's disease; Parkinson's disease; immune disorder; haematopoietic disorder; dyslipidaemia. New NOVX polypeptides and nucleic acids, useful for diagnosing, preventing or treating NOVX-associated disorders, e.g. diabetes, obesity, cancer or dyslipidemia, and in chromosome mapping, tissue typing or

Claim 1; Page 169-170; 586pp; English

The present invention describes NOVX proteins, where X can be 1 to 55 (e.g. NOV1). Also described above and a carriar; (2) a kit composition comprising a polypeptide described above and a carribed; in one or more containers, the composition described above; (3) an isolated nucleic acid molecule which encodes a NOVX protein of the invention; (4) a vector comprising the nucleic acid molecule described above; (5) a cell comprising the nucleic acid molecule described above; (6) a cell comprising the polypeptide described above; (7) methods for determining the presence or amount of the above polypeptide or nucleic acid molecule in a sample. (8) methods for determining the presence or amount of the above polypeptide or nucleic acid molecule in a first mammalian subject; (9) a method of identifying an agent that binds to the polypeptide described above; (10) a method for identifying a potential therapetuic agent for method of identifying a pathology that is related to an aberrant expression or betweening for a modulator of activity or of latency or prespection or aberrant physiological interactions of the polypeptide; (11) a method of coreceiving for a modulator of activity or of latency or prespective in a pathology associated with the polypeptide; (12) a method for modulator of a pathology associated with the above polypeptide in a method for protective, antiparkinsonian antilipaemic activities, and can be used in gene therapy. The polypeptide is useful in manufacturing a method coreceive, antiparkinsonian antilipaemic activities, and can be used in gene therapy. The polypeptide is useful in manufacturing a method of sorderia, and can be used of disease such as diabetes or obesity, infections, cancering and pathology associated with a human disease. The polypeptide or the nucleic acid molecule may be used to diagnose, treat or prevent metabolic disease, immune diseated with a human disease. The polypeptide or the nucleic acids can also be used as obseity, infections, cancer and antilipaemic activities, and an above

obesity, New NOVX polypeptides and nucleic acids, useful for diagnosing, preventing or treating NOVX-associated disorders, e.g. diabetes, cancer or dyslipidemia, and in chromosome mapping, tissue typing pharmacogenomics.

Claim 1; Page 170; 586pp; English.

The present invention describes NOVX proteins, where X can be 1 to 55 (e.g. NOV1). Also described and a carrier; (2) at the composition comprising a polypeptide described above and a carrier; (2) at the composition described above; (3) an isolated nucleic acid molecule which encodes a NOVX protein of the invention; (4) a vector comprising the nucleic acid molecule described above; (5) a cell of comprising the nucleic acid molecule described above; (5) a cell of physpetide described above; (5) a cell of presence or amount of the above polypeptide described above; (7) methods for determining the presence or amount of the above polypeptide or nucleic acid molecule in a disease associated with altered levels of expression of the above adisease associated with altered levels of expression of the above; (10) a method for identifying an agent that binds to the polypeptide described above; (10) a method for identifying a potential therapeutic agent for method of identifying a pathology that is related to an aberrant expression of aberrant physiological interactions of the polypeptide; (11) a method of succession of activity or of latency or predisposition to a pathology associated with the polypeptide; (12) a method for modulation or a pathology associated with the above polypeptide in a method for producing the above polypeptide in a method for producing the above polypeptide in a method for producing the above polypeptide or the nucleic and antilipaemic activities, and can be used in gene therapy. The nucleic syndrome associated with a human disease. The polypeptide or the nucleic syndrome associated with a human disease. The polypeptide or the nucleic acid molecule may be used to diagnose, treat or prevent metabolic syndrome associated with a human disease. The polypeptide or parking and disease or obesity, inchanced and parking in a pathology is a latency of issue or prevent we adjabetes or obesity in chromosome mapping, issue typing, preventive medicine and polypeptide and issued as an also be used as hybridiation present invention  $rac{1}{2}$

Stratum corneum chymotryptic enzyme; skin disorder; acne; psoriasis;

```
The enzyme encoded by this sequence is used in pharmaceutical, cosmetic and skin care products, especially to treat and prevent acne, xeroderma, or other hyperkratchic conditions (e.g. callosities or keratosis planis), ichthyoses, psociasis, eczema, etc. It is produced recombinantly following mammal, insect, plant, or microorganism transformation with plasmid pS507. ```
New isolated human amyloid precursor protein protease - used to develop prods. for the treatment or diagnosis of associated conditions, esp. Alzheimer's disease.
```

Claim 1; Page 44-45; 55pp; English.

Human amyloid precursor protein protease (AAW05383) is involved in the processing or clearance of amyloid precursor protein to form beta-amyloid peptide. Its amino acid sequence was deduced from a cDNA clone (AAM39783) obtd. from a human lung library. Recombinant protease can be produced in transformed or transfected prokaryotic (partic. E. coli) or enkaryotic and testing of cods. useful for treating or develop products for the design and testing of cods. useful for treating or preventing conditions associated with beta-amyloid peptide, esp. Alzheimer's disease

Transgenic mammal or its embryo useful as model for human disease, has heterologous nucleotide sequence coding for stratum corneum chymotryptic enzyme operably linked to promoter that drives its expression in skin.

Example 6; Page 37; 74pp; English.

**\$\$#\$\$\$**\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$

This invention describes a novel non-human transgenic mammal or mammalian embryo having integrated within its genome, a heterologous nucleotide sequence comprising at least a significant part of a nucleotide sequence coding for a stratum corneum chymotryptic enzyme (SCCE) or its variant, operably linked to a promoter that drives expression of heterologous scce or its variant in skin. The product of the invention is useful as a model.

CC or ameliorate a pathogenic condition, for development or testing of a comment or a pharmaceutical formulation, and for the development of a diagnostic method. It can also be used as a model for skin disease or component or tengosticin effective for the prevention or treatment of an abnormal or unwanted phenotype, and for screening or identifying a compound or composition effective for the prevention or treatment of an abnormal or unwanted phenotype, and for screening or identifying a compound or composition effective for the prevention or treatment of an compound or composition effective for the prevention or treatment of an inflammatory skin diseases selected from diseases consisting of epidermal inflammatory skin diseases selected from diseases consisting of epidermal inflammatory subject at the invention or treatment of an example of prutitus, atopic dermatitis, eczema, acne and inherited skin diseases or with epidermal hyperkeratosis. The mammal of the invention is also useful or potential compounds and compositions for relieve of various skin diseases consisting of contrain compounds and compositions for relieve of various skin diseases of tragment of the human stratum corneum chymotryptic enzyme, SCCE transgenic mammals described in the invention

WPI; 2002-643380/69.

N-PSDB; ABQ76226

Transgenic mammal or its embryo useful as model for human disease, has hererologous nucleotide sequence coding for stratum corneum chymotryptic enzyme operably linked to promoter that drives its expression in skin.

Claim 10; Page 58-59; 74pp; English.

This invention describes a novel non-human transgenic mammal or mammalian embryo having integrated within its genome, a heterologous nucleotide sequence comprising at least a significant part of a nucleotide sequence

coding for a stratum corneum chymotryptic enzyme (SCCE) or its variant, operably linked to a promoter that drives expression of heterologues acce or its variant in skin. The product of the invention is useful as a model for the study of disease with the aim of improving treatment, to relieve or ameliorate a pathogenic condition, for development or testing of a cosmetic or a pharmaceutical formulation, and for the development of a diagnostic method. It can also be used as a model for a skin disease or skin oacter. The invention is also useful for screening or identifying a compound or composition effective for the prevention or treatment of an abnormal or unwanted phenotype, and for screening or identifying a compound or composition effective for the prevention or treatment of an abnormal or unwanted phenotype, and for screening or identifying a compound or composition effective for the prevention or treatment of an abnormal or unwanted phenotype, and for screening or identifying a compound or composition effective for the prevention or treatment of an acceptance of inflammation, dermal inflammation, pruritus, atopic dermatities, eczema, ance and inherited skin diseases with epidermal hyperkeratosis. The mammal of the invention is also useful as a model for the prevention of compounds and compositions for relieve of various skin diseases where itch is a component. This sequence represents the human stratum chymotryptic anzyme, SCCE which is a serine procease synonymous with human kallikrein 7 (KLK7) and is used in the development of the

Nucleic acids encoding novel human proteases, useful for useful for treating diseases and disorders such as cancers, immune-related diseases and disorders, cardiovascular disease (e.g. restenosis) and inflammatory disorders 

The present invention relates to the isolation of novel human proteases, and the mucleic acids encoding them. The sequences of the invention are useful for treating diseases and disorders such as cancers (e.g. breast, colon, lung), immune-related diseases and disorders (e.g. inflammatory diseases and asthma) cardiovascular diseases (e.g. inflammatory diseases and asthma) cardiovascular diseases (e.g. inflammatory coronary thrombosis) brain or neuronal-associated diseases, metabolic disorders (e.g. diabetes, obesity), inflammatory disorders (e.g. theumator) attributes and psoriasis), central or peripheral nervous system diseases, migraines, pain, sexual dysfunction, mood disorders attention disorders, hypotension, hypertension, psychotic disorders, cognition disorders (e.g. Alzhaimer's disease, Parkinson's disease) and dyskinesias. The mucleic acids and polypeptides are also useful for treating viral infections caused by human immunodeficiency disucement and macular degeneration. AAU82702-AAU82760 represent the novel human proteases of the invention Claim 6; Fig 2N; 313pp; English.

(ORIG-) ORIGENE TECHNOLOGIES INC.

Jay G; Sun Z, WPI; 2003-058520/05. N-PSDB; ABX10343 Novel genes which are differentially regulated in prostate cancer, useful for diagnosing prostate cancer in prostate tissue sample and assessing therapeutic or preventive intervention in prostate cancer patients.

Claim 1; Page 293-294; 416pp; English.

The invention describes genes (I) which are differentially regulated in prostate cancer. (I) Is useful for diagnosing a prostate cancer in a sample comprising prostate tissue, which involves determining the number of target genes which are differentially regulated in the sample, where the number is indicative of the probability that the sample comprises

```
prosecte cancer. It, it useful for assessing a cherapture of preventive intervention in a subject having a prostate cancer, which involves determining the expression levels in a sample comprising prostate tissue of target genes which are differentially-regulated in prostate cancer. Preferably, the expression levels of at least 10 genes are determined.

(I) is also useful for identifying agents that modulate a biological activity of a polypeptide differentially-regulated in prostate cancer cells with a test agent under conditions effective for the test agent to modulate a biological activity of the polypeptide, and determining whether the test agent modulates the biological activity. It is useful as molecular markers, as drug targets, and for detecting, is useful as molecular markers, as drug targets, and for detecting, products are used activity of the polypeptide, and dagnosing, straging, grading, assessing, monitoring, prognesticating, products are used in the diagnostic test to assay for presence of cancer e.g., in tissue sections in biopsy sample, in total RNA, in lymph, in blood etc. (I) is useful for assessing cancer e.g., to determine the type of cancer, its stage of development, the nature of genetic defect, etc. The polypeptide encoded by (I) can be used as target for therapy or drug discovery. (I) can also be used for expressing the polypeptide and thus for searching specific binding partners of the polypeptide and thus of specific genes, and groups of genes, expressed in pathways to physiologically relevant to prostate cancer. The identification of functional and disease pathways and the delineation of targets in these pathways which are useful in diagnostic, therapeutic, and clinically relevant to prostate cancer penalts, and clinically and become of a protein disease pathways and the delineation of targets in these pathways which are useful in diagnostic, therapeutic, and clinically and proved and the delineations of argetic applications.

ACESON FINITION (EC 3.4.21.35), submandibular mGK-2 - mouse (fragment)
NyAlternate names: glandular kallikrein
Cispecies: Mus musculus (house mouse)
Cispecies: Musculus (sequence_revision 05-Jun-1987 #text_change 22-Jun-1999
Ciscession: AG5308
R;Mason, A.J.; Evans, B.A.; Cox, D.R.; Shine, J.; Richards, R.I.
Axitile: Structure of mouse kallikrein gene family suggests a role in specific processing
A;Reference number: A00941; MUID:83219214; PMID:6602295
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A,Molecule type: DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             mplement factor D (EC 3.4.21.46) precursor [validated] - human (fragment)
Alternate names: adipsin; C3 convertase activator
Species: Homo sapiens (man)
Species: Homo sapiens (man)
Accession: A40197, A00936; A60571; S66645
White, R.T.; Damm, D.; Hancock, N.; Rosen, B.S.; Lowell, B.B.; Usher, P.; Flier, J.S.;
Biol. Chem. 267, 9210-9213, 1992
Title: Human adipsin is identical to complement factor D and is expressed at high leve
Reference number: A40197; MUID:92250520; PMID:1374388
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             semenogelase (EC.3.4.21.77) precursor - rhesus macaque N_sAlternate names: gamma-seminoprotein; P-30 antigen; prostate-specific antigen; prostat \delta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Molecule type: protein ,Residues: 19-44, G',46-51, O',53-75, TH',78, P',80-83, XXXITIE',90-172,86-91,185-235, Note: a few residues were assigned from the previously published sequence of Reid et a ,Miyata, T., Oda, O., Inagi, R., Sugiyama, S., Miyama, A., Maeda, K.; Nakashima, I.; Ya ol. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

## ALIGNMENTS

```
cleaves insulin B chain at 6-Leu-|-Cys-7, 16-Tyr-|-Leu-17, 25-Phe-|-Tyr-25, and 26-Tyr-|-Thr-27. Could play a role in the activation of precursors to inflammatory cytokines.

--- TISSUE SPECIFICITY: Abundantly expressed in the skin and is expressed by keratinocytes in the epidermis. Very low levels are also seen in the brain and kidney.

---- SIMILARITY: Belongs to peptidase family S1. Kallikrein subfamily.

Serine proteages in rodent hippocampus.";
J. Biol. Chem. 273:23004-23011(1998).
-! FUNCTION: Suggested to be involved in kindling epileptogenesis and hippocampal plasticity. Has a strong proteolytic activity against fibronectin (By similarity).
-! CATALITIC ACTIVITY: Preferential cleavage: Arg., Lys...
-! SUBLEBLULAR LOCATION: Secreted (By similarity).
-! SINCELLULAR LOCATION: Secreted (Lysimilarity).
-! SINCELLULAR LOCATION: Secreted (Lysimilarity).
-! SINIARTY: Belongs to peptidase family SI. Kallikrein subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | XLXZ HUMAN STANDARD; PRT; 261 AA. | XLXZ HUMAN STANDARD; PRT; 261 AA. | AC P20151; 015946; 290UZ92; DT 01-FRB-1991 (Rel. 17, Created) | DT 01-FRB-1991 (Rel. 17, Last sequence update) | DT 01-CCT-2003 (Rel. 17, Last annotation update) | DF 01-CCT-2003 (Rel. 42, Last annotation update) | DE Glandular kallikrein 2 precursor (EC 3.4.21.35) (Tissue kallikrein) | DE (Prostate) (HGK-1). |

(POTENTIAL).
GDSGGPLVCNGVLQGITSWGPEPCALPEKPAVYTKVVHYRK
                                                                                                                                                                                                               in Kininogen to release Lys-bradykinin.
-!- CATALYTIC ACTIVITY: Preferential cleavage of Arg-|-Xaa bonds in small molecule substrates. Highly selective action to release kalidin (lysyl-bradykinin) from kininogen involves hydrolysis of Met-|-Xaa or Leu-|-Xaa.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   IsoId=P20151-3; Sequence=VSP_005400;
SIMILARITY: Belongs to peptidase family S1. Kallikrein subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Interero; irruoil24; Peptidase_S1.

RI "Immunogenetics 46:181-1917(1997).

C. '- FUNCTION: Polymorphonuclear leukocyte serine protease that

CC degrades elastin, fibronectin, laminin, vitronectin, and collagen

CC ypes I, III, and IV (in vitro) and causes emphysema when

administered by tracheal insufflation to hameters (By similarity).

CC -- CATALYTIC ACTIVITY: Hydrolysis of proteins, including elastin, by

CC -- CATALYTIC Activity: Belongs to peptidase family SI. Blastase subfamily.

-!- TISSUE SPECIFICITY: Isoform 1 is predominantly expressed in the pancreas while isoform 2 is expressed in adult brain and hippocampus. Both forms are alofound in fetal brain and placenta. Not detected in kidney, spleen, liver and lung.
-!- SIMILARITY: Belongs to peptidase family 51. Kallikrein subfamily.
                                                                            SEQUENCE FROM N.A. (ISOFORM 1).

Gan L., Gelinas R., Gown A.M., Moss P., Smith R., Wang K.;

Molecular cloning and characterization of a novel serine protease,

ovasin, a potential molecular marker for ovarian carcinomas.";

Submitted (SEP-1998) to the EMBL/GenBank/DDBJ databases.
                                                                                                                                                                                                                                          SEQUENCE FROM N.A. (ISOFORM 1).

Characterization of thesus monkey prostate specific antigen cDNA."; Elochim. Biophys. Acta 1174:207-210(1993).

-I- FUNCTION: PSA presumably hydrolyzes the high molecular mass seminal vesicle protein thus leading to the liquefaction of the seminal coaqulum. PSA is a glandular kallikrein.

-I- CATALYTIC ACTIVITY: Preferential cleavage: Tyr-1-Xaa.

-I- CATALYTIC Belongs to peptidase family SI. Kallikrein subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                         (BY SIMILARITY).
